It allows you to edit files based on your operating system (you can add or replace text, change filenames, move to a new location and much more). It works as a plug-in. A plug-in allows you to add an app to a larger program, such as a text editor or even an entire operating system, which is then launched with the plug-in. In this case, KEYMACRO replaces the standard Text Editor (for Windows and Mac) or TextWrangler (for Mac). For example, you can replace the default Word processor with KEYMACRO (you will be able to edit your documents with the same app), you can use the built-in calendar as an appointment app, or you can replace the standard application for accessing your email with KEYMACRO. KEYMACRO runs from a separate application window, so you can use it while you work. All the settings and data will be saved automatically. You can keep the app running in the background. This way, if the app crashes, it will close by itself.
