I'm using the oop functionality of term reference lumenary to insert a term into a custom taxonomy. But I can't find anything to restrict the term to a specific vocabulary. So lets say that I have two vocabularies for instance WebVirus and Security and I want to add the term "example" to the vocabularies Security, but it needs to be forbidden for the WebVirus vocabulary. I tried \$term = Taxonomy::create('taxonomy_field_example',array('vocabulary'=>'webvirus')); But that didn't work. Would be nice to have something like a \$taxonomy->is_allowed('WebVirus') A: You could do something like this: \$term = Taxonomy::create('taxonomy_field_example',array('vocabulary'=>'webvirus'),array('allowed' => array('webvirus' => 1))); That will only allow the term to be created if it is allowed for webvirus vocabulary. ba244e880a
