Standard products AutoCAD 2017 AutoCAD 2017 is a release of AutoCAD that was first released in October 2015, and is the successor to AutoCAD 2015 and AutoCAD 2013. The product can be downloaded for Microsoft Windows, macOS, and Linux. The macOS version of AutoCAD 2017 will also be available as a download from the Mac App Store in early 2017. AutoCAD 2018 AutoCAD 2018 is the successor to AutoCAD 2017 and is the successor to AutoCAD 2015 and AutoCAD 2013. AutoCAD 2017 and later versions do not support the use of extensions in any form, including files created by third parties, both by users as well as by software producers. AutoCAD 2018 and later versions support the use of extensions in the form of programmable toolbars and Ribbon plugins. A few non-commercial products have continued to be released, such as DimensionPro and Autodesk's DimensionX. Some small/home user CAD packages (such as NCad) have been updated to use the newer API. AutoCAD 2018 can import and export DXF and DWG (formerly DGN) files, including a few newer DXF file formats. A new DXF viewer was added for Windows 7 (with a new version released for Windows 10 in early 2017), which is a native DXF editor. In September 2017, Autodesk announced the AutoCAD 2018 software package will no longer be distributed by Autodesk, but will become a Service & Support offering. AutoCAD 2019 AutoCAD 2019 is the successor to AutoCAD 2018. It is the successor to AutoCAD 2013 and AutoCAD 2016. AutoCAD 2019 is available for Microsoft Windows and Macintosh, and is a 32-bit product running on Windows 7, 8, 8.1, 10, and macOS 10.13. Autodesk Exchange Apps are available for Windows and macOS. The product's interface is modeled after Microsoft Office. Like AutoCAD 2017, AutoCAD 2019 does not support the use of extensions in any form, including files created by third parties, both by users as well as by software producers. The successor of AutoCAD 2019, AutoCAD 2020, was released in November 2019. Autodesk 3 a1d647c40b

Molecular characterization of a female-specific and embryo-specific nonmuscle actin of *Xenopus laevis*. A nonmuscle actin (NM actin) cDNA has been isolated from a lambda ZAP cDNA library constructed from poly(A)+ RNA of unfertilized eggs of *Xenopus laevis*. The cDNA contains an open reading frame of 1180 base pairs (bp), coding for a protein of 390 amino acids with a predicted molecular mass of 43 kDa. The amino acid sequence of the predicted amino-terminal region of NM actin shows high homology to other nonmuscle actins. The carboxyl-terminal region of NM actin contains an actin-associated protein 2 homology domain. NM actin is, like other nonmuscle actins, an actin monomer-binding protein, and it can also bind to nonmuscle myosin II. However, compared to other nonmuscle actins, NM actin displays a higher affinity for G-actin in vitro and therefore is more effective in polymerizing. NM actin is present in unfertilized eggs and in embryos prior to the gastrula stage and becomes restricted to the oocyte during oogenesis. The NM actin gene is expressed exclusively in the egg during oogenesis, and it becomes undetectable in the embryo at the gastrula stage. However, in oocytes it is reexpressed in the adult ovary. Injection of synthesized mRNA into *Xenopus* oocytes results in the expression of a stable protein, which suggests that NM actin mRNA is present at sufficiently high levels to account for the steady-state accumulation of NM actin mRNA. Immunofluorescence microscopy shows that NM actin is predominantly localized in the egg cortex and ooplasm. NM actin also appears to be associated with the veget

Q: C# If statement for specific text in string I have a string in the following format, string = "ab" and I need to perform an operation only if the first letter is "a". How can this be achieved in C#? A: Use Regular Expressions. Something like: `var pattern = new Regex(@"^a"); string match = pattern.Match("ab").Value;` Would return "a".

Highly enantioselective carbonyl allylation of aldehydes using the N-Heterocyclic Carbene Ligand **I**. The N-Heterocyclic Carbene (NHC) ligand **I** was synthesized from the commercially available and inexpensive chiral ligand 1,2-bis(1,5-dioxopyrrolidin-3-yl)ethane (dppe). The reaction of this ligand with N-phenylpyrrolidine gave the corresponding NHC carbene ligand in high yield. The reaction of the chiral NHC ligand and aldehyde
