What's New In?

The ToggleMode application was designed to be a small utility that allows you to change the Windows startup mode from normal to "safe with command prompt"-like, and back. While that mode is standard in Windows 2000 and XP, it

doesn't exist for Windows 9x, Millennium, nor NT. The ToggleMode utility "creates" it for all Windows 32 platforms. ToggleMode functions equally well under W2K and XP and is easier to use than the native multiboot menu. Starting Windows into 'safe with command prompt mode' is essential for conducting the removal and cleaning from viruses, as well as performing Windows corrective maintenance. ToggleMode will install itself to the Windows

directory the first time it runs. Just run ToggleMode from the server to install. To toggle the Windows startup mode, run the command TOGGLMOD from the desktop 'run' menu, or from command line, and select the desired startup mode when prompted, then restart the computer. Those silly CapsLock key and ShiftLock keys seem to be getting more and more popular with each new version of Windows, I believe. Because Microsoft recommends holding these keys down during

installation of Windows, some of us have to do so when installing, as well as when upgrading from one version of Windows to another.

And, of course, we have to do that when using the Windows recovery console. However, now you have the "safe mode" option, so you don't have to worry about that anymore. You simply hold down the Shift key when the Windows installation or upgrade starts, and let go when the "safe mode" option appears. That will provide the same effect. If you upgrade a

system from a previous version of Windows, you might want to use the Windows Upgrade Assistant utility to facilitate the upgrade process. See The ToggleMode application was designed to be a small utility that allows you to change the Windows startup mode from normal to "safe with command prompt"-like, and back. While that mode is standard in Windows 2000 and XP, it doesn't exist for Windows 9x, Millennium, nor NT. The ToggleMode utility "creates" it for
