infarction/brainstem infarction, demonstrated atrophy of the left thalamus, left parietal and occipital lobes in MRI. Regarding other patterns of brain atrophy, a previous study showed that diffuse brain atrophy was the most common brain atrophy pattern in patients with SVD, although focal pattern was the most frequent in patients with lacunar stroke \[@pone.0157101.ref038]. In addition, 50% of patients with lacunar stroke showed asymmetric brain infarctions, and the occipital lobes were involved in 39% of those with lacunar stroke \[@pone.0157101.ref039]. In our study, however, patients with lacunar stroke had more frequent atrophy in the left parietal lobe. Our finding was consistent with previous findings, suggesting a vascular etiology for the asymmetrical regional changes in the brain \[@pone.0157101 570a42141b
