Cost management of all assets. Search Utilities Please contact us for detailed lists of features and available packages. Support Details: FTP access: Yes Installation Media: CD ManageEngine Software Support Details: License Details: 4 Years System Requirements: Windows 2000/XP/2003/Vista/2008 @karan. In Asset Explorer's Actions, the bar has a tooltip next to the Play Sound, which states "Play sound from selected files or directories". You can set it to Play from Devices, at which point Asset Explorer plays the previously set sound from any currently playing/playing. Note that the sound will play from wherever it is playing now - say from the "Playback" tab of DVD Player. Karan I created a group for Used Items in Asset Explorer to organize all my items in a searchable format. I can then search for items and sort by relevance, price, and so forth. But the real power of Asset Explorer is that I can add notes to each asset, such as what I paid for it, how much it costs, how long it has been used, whether it is still working, etc. There is also an Asset Histroy, which shows any history of changes in asset ownership. In Asset Explorer's Actions pane, you can select which items to include in the searches based on your criteria. I've added a "completed" filter to only show completed transactions. In the Used Items group, you can select whether you want to include categories, such as "Software", "Hardware", "Peripherals", etc. Based on your criteria, you can restrict which categories to include. If you scan a network for software, you can see a full list of all available software items in your environment. Add notes, make copies, etc. You can also assign categories, for example, "Non-Compliant" items. Then, when you come back to that report and it's filtered to show only Non-Compliant items, you can see all those items in one list. If you 09e8f5149f
