Once DTMF Dial tones are generated, you can record them to MP3, WAV or WMA format files for a handy and convenient playback. You can record the same tone to multiple files at once by pressing the button. The program will automatically select the playback device(s) and format(s) for your DTMF recordings. It is also possible to create the dial tones directly on-the-fly by using the Tones Mapper windows. The DTMF Dial tones you can use on your voice lines include the standard tones used by most DTMF systems. Tones like "Ring", "*", "#", "1", "2", "3", "4", "5", "6", "7", "8", "9", "+", "#0" and "0" can be generated from a DTMF source. You can also record the "Break" and "Busy" tones. Many additional features make DTMF Dial tones easy to use. You can add additional dial tone sets to the program and easily edit existing tones. With the help of the Edit Tones dialog, you can edit individual DTMF dial tone parameters like the tone length, pause length and set the DTMF tone on hold period. The graphical dial tone display allows you to insert custom tones easily and see their visual effect on the dial tones. The dial tone display is also able to keep running with your DTMF dial tone generation without interruption. In addition to generating the dial tones, the program can be used to record them. This allows you to listen to your DTMF dial tones in your own voice. All the recorded dial tones can be placed into multiple files. The DTMF Dial tones application has a simple and easy-to-use interface. The interface is split in different windows. The first window, the Dial Tones window, is the base of the application. Here you can select your DTMF tone sets, edit the dial tones, record dial tones and generate your dial tones. The second window, the Tones Mapper, is used to create dial tones on-the-fly by using the pre-programmed Dial Tones templates. Both the dial tone and the tones mapper window have a graphically user friendly interface. Requirements: The application needs a sound card capable of playing tones. It works with the Intel ICH6 or ICH7 family of audio chips, and it requires a good
