How to Crack PDF Complete Corporate Edition 4.0.0.1 December 14th, 2009 - In 2008, I decided to replace my aging MacBook Pro with a MacBook Air. I chose the MacBook Air because I wanted the most basic computer possible. A quick internet search showed me that this computer could easily be hacked to run OS X. I instantly downloaded the hack, and when I booted into OS X, I found my Mac to be completely different than it was before. Gone was the Pre-installed WiFi card and hard drive. My previous MacBook Air had both of them filled. Here is a video of the process which shows everything that was removed from my MacBook Air. The hack required a few basic tools: Software - A MacGyver kind of guy, I downloaded every free software/utility that I could find. I even found some free utilities at GoodUSB.com. Sadly, these tools did not work with the latest Snow Leopard USB port to correctly reverse the changes. For example, I was unable to use my external USB hard drive. Hardware - I used an old dock with a power strip and a keyboard extender from eSale. Wait, what?? I will summarize the steps below so that you can execute the hack properly. 1) Boot into OS X. 2) Click the Apple Menu->Start Disk Utility. 3) Click the Erase Tab. 4) Select the Hard Disk drive. 5) Click the Apply button. 6) Close Disk Utility. 7) Boot into Recovery mode by holding the alt (Windows) key and the Option key at the same time. 8) Select Disk Utility 9) Select Repair the System disk. 10) Select 'Validate disks' in the top left. 11) Validate each disk and wait for all of them to finish. 12) Restart your computer 13 3e33713323
