Pokémon Omega Ruby has been confirmed as a 3DS title, as it contains a game disc. As this was revealed at a Nintendo press conference, it is only logical that this was the title shown . A: I am afraid you cannot play Pokémon Omega Ruby using citra. It requires NTRUSIVA or below in order

to run. Source: Play-Asia A:
There is no working native
version of Pokémon Omega
Ruby for Citra. You can,
however, play it on
NTRUSIVA (which you can get
from the Nintendo's website)
There is also a native version of
Alpha Sapphire for Citra Q:
Trying to pull event on a div
that is a child of a table and not
parent from firebase I am trying
to pull the event(s) from a div in
Firebase, however it will not

pull anything. I can access everything else in the database but for some reason not the event. What am I doing wrong?

I have tried making the div itself a firebase database node using children of that node but that did not work either. I have also tried nested loops but that did not work either.

```
var ref = firebase.database().ref("Events");
ref.orderByChild("eventTitle").equalTo("Urban Outfitters").on("value", function (snapshot)
```

```
{ console.log(snapshot.val());
}); A: Try this way: Firebase
DB Code : { "events" : [ {
  "eventTitle" : "Urban
Outfitters", "eventDesc" : "The
store's street-level location.",
