Extracting Data From Text File In Matlab
This video tutorial will teach you how to read and display a text file in Matlab. The tutorial is very detailed; it will teach you how to load a text file into Matlab, and then use the text functions to easily read the data into your program. You will also learn how to use basic data flow control structures such as for-loops in Matlab. This video tutorial is taught at a beginner level. What that means should be easy to understand. However, the student is expected to have a working knowledge of numbers, and general high school mathematics. Here is the text file we will be loading in the program.

This video tutorial is part of a series of Matlab tutorials. Each tutorial is a complete course where each lesson builds upon the previous ones. Each tutorial comes with eight or so chapters, a folder with txt files and a README file. The purpose of each chapter in a tutorial is to teach you a specific aspect of Matlab, and the purpose of the overall tutorial is to teach you how to use Matlab to solve problems. If you are brand new to Matlab, I suggest that you first familiarize yourself with the Matlab documentation. The Matlab website offers a tutorial section that offers up quick guides and overviews of the Matlab language. I try to make my Matlab tutorials available at Matlab Central. Make sure you sign up for access to their Matlab Central website at
