* **Adobe Photoshop Elements** teaches you the basics of editing images for the Web using all the Photoshop tools in the Lite version. It's useful to have if you're just starting out with design and photo editing. * **Adobe Photoshop CS for Mac and Windows** allows you to work on single or multiple projects simultaneously while offering professional tools that can be costly. * **Adobe Photoshop Lightroom** works on images from several different shooting formats and gives you a way to organize all your images into a library and tag them for easy retrieval. It's good for showing your work or including images in a book or website. * **Adobe Fireworks** helps you create Web pages and other graphic or multilayered designs. It's part of the Creative Suite, and you can see more about it in Chapter 24. * **Adobe Dreamweaver** is an all-in-one Web authoring software tool that enables you to create Web pages with many different design elements, such as graphics, forms, and links. I describe Dreamweaver in more detail in Chapter 25. * **Adobe Illustrator** provides drawing tools for laying out and sketching out objects. You use Illustrator as a vector drawing tool. I discuss this program in detail in Chapters 24 and 25.

How do I open and edit photos and graphics files in Photoshop Elements? You can upload your images to your desktop, open them from a digital camera, from your scanner, from a flash drive, from a card reader, or from a disc. You can also import photos from your camera, and you can view all your photos in thumbnails on a slide show. You can crop the photos using the crop tool. You can rotate the photos, change their colors, adjust their contrast and brightness, sharpen or blur them, or change their background to a new color. You can make a selection and add a text. You can add a layer, cut and paste an image or select from the gallery. With layers, you can add another photo, add a background color, resize the photo, or add effects. How do I create drawings, vector graphics and photos? The tools work the same way in Photoshop Elements as they do in the professional version. However, you cannot edit photos when working in the free version of Photoshop Elements. How do I create a new document in Photoshop Elements? You can open a new image document. Drag an image file to the main window and then click the Open button. How do I create a new painting or drawing? In Photoshop Elements, you can create a new painting using the Brush tool. Click the Brush icon in the toolbox, and a small brush opens. Choose a brush size and shape and then click on a canvas to start painting. There are a variety of brushes to choose from, including pencil, eraser, dry brush, brush, watercolor, oil, and spray. You can also use the Auto Paint tool to simulate the strokes of a brush. How do I change the color of a photo? Choose Edit > Edit Colors > Edit Color. A color box will open and you can select a color. To change the hue of the color, drag the vertical handles near the color box and click the triangle in the color box. You can also choose Edit > Edit Colors > Brightness/Contrast. How do I fix the colors in a photo? You can use the Photo Enhance tool to adjust the colors of a photo. In Photoshop Elements, choose Edit > Enhance > Photo, and then choose a photo from your camera roll, your file system or from a photo in the thumbnails panel. Choose Enhance a681f4349e

I'm trying to create a label in a new view but the label won't disappear. I have a button to create a new UIView and then a label in it. The only way to remove the label is to go back out of the UIView and then it disappears. The issue I have is that I'm trying to set the UIView's background color to black so that it doesn't have that white line for an ugly moment, but once the label disappears all the black goes away and it's back to having that blue line. I've added some pictures to help out. This is the view that loads: This is where it goes: The label in this case only goes away once you click out of the view and then click back in. What I would like to happen is for this label to just disappear with the whole UIView. Does anyone know how to do that? A: The issue is that the UIView is the only UIV
