The Max software was designed in late 2004, but the beta of it was released in 2003, and the real production release. Morphological and cytochemical features of ovarian undifferentiated carcinoma. An ovarian undifferentiated carcinoma, resembling endometrioid adenocarcinoma, was studied by light and electron microscopy, as well as by histochemical and immunohistochemical methods, including CD30 and CD15 positivity. The case was accompanied by ovarian endometriosis. The neoplastic cells were polygonal, with large, centrally located nuclei and a high nuclear cytoplasmic ratio. The tumor cells had a moderate amount of eosinophilic cytoplasm and moderate amounts of glycogen, lipids and mucopolysaccharides. The tumor cells were strongly positive for CD30 and CD15. The proliferative activity was high. The morphological and cytochemical findings confirmed the diagnosis
