Autodesk released a first AutoCAD release that was marketed and sold to engineers, architects, and other technical professionals. The version that would be marketed to the general public was released in 1992, and would be an AutoCAD 2000 release. In 1998, Autodesk released AutoCAD LT, a lower-priced product targeted at non-technical users, such as small businesses, schools, and individuals. AutoCAD LT was designed to compete with Adobe Illustrator, CorelDraw, and Freehand. AutoCAD LT would be replaced in 2003 with AutoCAD Architecture. Vector images consist of digital paths. These digital paths can be curved or straight, and can be made up of closed or open curves, straight lines, arcs, angles, and polygons. Raster images consist of "pixels" or dots that are arranged in a grid, often with color. Raster images are typically used in digital photographs and scanned drawings. AutoCAD is a desktop CAD program, which means that the program can be used anywhere a computer with a graphics card is connected to a high-resolution monitor, and the software is installed on the computer. If the computer is used as a workstation at a drafting table, the software is activated when the computer is turned on. The most recent release of AutoCAD is AutoCAD 2018. The most recent AutoCAD releases will typically work on computers that are upgraded to Windows 10 or later. The latest release of AutoCAD, AutoCAD R18, was released in October 2019. This functionality has recently been made available to third-party developers as a part of a new product initiative called "XDRAW" Commands and other functions Autodesk supports the use of script files for automation and customization of Autodesk products. They are divided into two types: the Shell and the Monolithic. The Shell files are used to control the product and the Monolithic files are used to add features to the product. Command-line tool The AutoCAD command-line tool was used to automate functions in the older (since 2007) version of AutoCAD. Starting with AutoCAD 2010, commands can be performed using the Product Launch Pad and Python scripting. Python API Python is a programming language developed for use with AutoCAD. The C++ API is extended to allow scriptable access to all features of the program. These are called the Autodesk Exchange Runtime (EXE) APIs. Python is supported by AutoCAD 2008, 2009, 2010, and AutoCAD LT 2011, 2012. Examples of scripting Autodesk Exchange provides a number of example scripts. These include AutoCAD block insertion, point selection, sheet set management, face recognition, region detection, line intersection and much more. Advanced features AutoCAD includes features and settings that are useful for advanced users and power users. Export to PDF One of the most important capabilities of AutoCAD is its ability to export to various file formats. This is useful for all types of printing, from laser printing to inkjet printing to scanning and more. A wide variety of settings are available, allowing the user to choose the best settings. Online help Help for most AutoCAD functions is available in AutoCAD and in other products from Autodesk, such as Inventor. The online help is accessible by clicking the Help button on the main menu bar, pressing the F1 key, or starting a Help session. Templates When working on a drawing, it is a good practice to save a copy of the drawing before making any changes to it. To speed up the process, it is possible to create templates. Templates can be created using tools, commands, or macros. AutoCAD comes with a large number of pre-defined templates. These include floor plans, electrical work, sketches, and many more. Is there a way to have a set of toolbar buttons outside of the map view? In my case, I want to be able to do some math analysis in a toolbox window, but I can't see how to add buttons to this area. I've seen various examples of custom toolbars on ArcGIS for Business (but when I try the same thing with ArcGIS 10.1 for Desktop I can't seem to access the toolbar from outside of the map view. I realize this could be accomplished by making a separate window for the toolbox, but for this particular case I would rather not bother with that. A: No there isn't. Cesium and iodine co-exposure affects lung calcium, bone calcium and parathyroid hormone. To investigate whether cesium and iodine co-exposure might affect calcium metabolism and parathyroid hormone (PTH) level, Sprague-Dawley male rats were exposed to 0 (control), 0.5, 1.5, or 5.0 mg Cs/L, in the presence or absence of 1.8 mg I/L, for 6 months. Plasma Ca levels were determined, and the contents of Ca in bone, lung, and kidney were assessed. A calcium-sensing receptor (CaSR) antagonist, NPS 2143, was used to investigate the role of CaSR in the effects of Cs and I co-exposure. Compared with control, Ca levels decreased at all Cs concentrations in the absence of I and decreased at all Cs concentrations in the presence of I. Bone calcium, and plasma PTH levels increased at all Cs concentrations in the absence of I, but increased
