The announcement of new computers from PC World. "The sound quality of the new sound cards just blows me away The previous popular Creative sound card had flaws such as no adjustment of volume control or a balance tab. This was our big news story in the spring but we were also delighted to reveal plans for a DMA controller which would enable a full digital editing suite with audio sampling. It is important to note that this will only be used for 'support' functions and that DMA will be available for independent developers to use in their own products." Interesting and significant stuff. One of the reasons why people are moving from Windows to Mac, and certainly much more of the music industry is moving to this platform. Introducing Music Enhancer Pro. "Music Enhancer Pro 2.2.2 is designed to make music sound better. It's a software enhancer that makes music sound richer, deeper and more powerful. Unique in its approach, Music Enhancer Pro's technology retains audio quality while offering better sound management and a feature rich interface. Features include: How to Listen: 1. ----- This music could only have been produced using one of the most cutting edge quality equipments, using the latest xcelaration technology. Studio Sound FX is a useful and easy-to-use Winamp plugin that will help you to transform your PC speakers into high quality audio devices. Currently music is compressed and made to sound loud at the sacrifice of dynamics. Music with no dynamics sounds 'cheap', lacking in clarity and excitement when listened through PC Speakers and Standard Hi-Fi Audio enhancers available for winamp make the sound louder or different but not necessarily clear and realistic. Studio Sound FX is different to other audio enhancers by using exclusive Acuity technology that functions on any speaker making the sound more coherent and minimising percieveable colourations made by standard quality speakers. Studio Sound FX will give you a true to life experience of your favourite songs, hearing them the way the recording engineer intended in all its glory. \*High quality stereo enhancements \*Uncompressed Digital Audio \*Real time adjustments \*Universal Audio driver \*High quality stereo enhancements \*Uncompressed Digital Audio \*Real time adjustments \*Universal Audio driver \*Static and Dynamic EQ \*Percussive enhancements \*- High Quality Stereo Enhancements There are many reasons you should try this high quality audio enhancer. First off it will add high quality sound to any other sound source or output device in your home. If you're listening to music through a CD player or a iPod and you plug your speakers into the output jack this plugin will change your output device into a high quality stereo amplifier. If the speakers in your room are really bad, then it will add high quality stereo enhancements, making them sound better. If you've noticed that you can only barely hear your music through your stereo, this plugin will add a high quality stereo enhancement that will bring your output sound to life. If you're listening to music through your stereo or home theatre system, and it isn't sounding great, plug in your output device into this plugin and your audio will sound better than ever! A proper stereo enhancement device will change your compressed digital music, so you can hear it the way it was intended to sound. Quality stereo enhancements aren't just a marketing ploy. They really change the sound and make it sound better. Another reason you should use this plugin is because it has real time adjustments. That means you can adjust the improvements as the music plays. And there's no need for a special program, the plugin has its own program. The third reason why you should try this audio enhancer is because the sound is uncompressed, which means you are using the original file as it was recorded, and the sound is being played unaltered. Audio enhancers don't just change the sound, they make it sound clearer. The last reason you should use this audio enhancer is because you can adjust the enhancements in real time. The sound will change with the music as you listen and the sound will improve the more you listen. If you're using a Mac or Linux based PC, then don't worry. This plugin has an all new universal driver that will allow you to use it on those platforms. Universal Audio Drivers These audio enhancers work on any sound output device, so you don't need to worry that it won't work on your home theatre system. In fact, as this plugin will
