Category:Personal computersQ: PHP login issue in Paypal Website Payments Pro I have written a code in php which provides a basic login and authentication for my Paypal Website Payments Pro. The problem is that if the user is returning back to the website directly via a direct link or in a web browser then the authentication is working fine and the user is logged in; however if there is a redirect from a popup (not a browser) then the redirect is still happening when user click on the logout button but it is not redirecting, he is actually still logged in. This behavior is not happening when I use Sandbox account. Here are my PHP Code :

```
$rest_url = ""; //Get user login details from database $sql = "SELECT user_id, username, password, role_id, e_mail_id FROM login"; $result = mysql_query($sql); $loginId = NULL; //If user exists if(mysql_num_rows($result)!= 0) { $row = mysql_fetch_assoc($result); $loginId = $row['user_id'];
```
