ShapeTools is a small and handy software application which is created to simplify the processes of working with the Shapes in MS Office. Most of the Microsoft Office Shapes' dimensions can be modified to various degrees, however the process is still too long and complicated. With this software you will be able to easily change the dimensions of any type of Office Shapes. The simplicity of the ShapeTools' interface, in comparison with the usual MS Office Shapes' dialog box, makes the process of modifying the dimension parameters quite simple. It has a small toolbar that includes the different functions necessary for the modification of the shapes' dimensions, as well as several options and settings. Note: Shapes with curves Freezing (locking) of the shapes after modifying the parameters Caching Unit of measurement (in inches, cm, mm, or meters) Aspect ratio (width/height ratio) Note: Shapes may not be edited with respect to each other Shapes may not be edited with respect to each other if they are locked. Moving/copying shapes may cause shapes to not be edited and locked. It is not possible to edit the dimension of shapes in MS Office 2003. An error message is displayed if the shape dimensions are too large. You cannot use the ShapeTools' toolbars in MS Word, and the toolbar is not integrated into MS PowerPoint. You can use the ShapeTools' toolbar in MS Word only if MS Office Shapes is not installed. You can use the ShapeTools' toolbar in MS Excel only if MS Office Shapes is not installed.
