This study was conducted to determine the pharmacokinetic profiles of tocilizumab in patients with rheumatoid arthritis (RA) and chronic hepatitis C (CHC) in the context of a multicenter, multi-regional, open-label study of tocilizumab in Japanese RA and CHC patients. Sixteen Japanese patients with RA, 11 patients with CHC, and 4 healthy volunteers were enrolled in the study. Each patient was administered tocilizumab 8 mg/kg intravenously on day 0. Serum concentrations of tocilizumab were measured by using the Pharmacokinetic/Pharmacodynamic (PK/PD) method, which was modified by using a monoclonal antibody-free PK/PD assay. Serum levels of interleukin 6 (IL-6) and C-reactive protein (CRP) were measured by using an enzyme-linked immunosorbent assay kit. Serum concentration-time profiles of tocilizumab were similar in patients with RA and CHC. There were no differences in maximum concentration (C_{max}) and area under the concentration-time curve (AUC) from 0 to 24 h (AUC(0-24)), between patients with RA and CHC. The serum levels of IL-6 in patients with RA and CHC were 15 pg/mL (range, 1.0-58 pg/mL) and 13 pg/mL (range, 1.5-65 pg/mL), respectively. Corresponding serum levels of CRP in patients with RA and CHC were 0.6 mg/dL (range, 0.5-1.4 mg/dL) and 0.6 mg/dL (range, 0.2-0.9 mg/dL), respectively.

You could still use it to extract files like it as well if you need to. From the manual: BinDiff can find differences of any binary file and provides additional set of functions that are useful for analyzing and understanding different binaries: BinDiff can load files from any location you specify in "Load files from:" menu. BinDiff can write output (metadata) to your file or to your clipboard if you ask it to do so. BinDiff can load metadata from any file. BinDiff can also analyze a file in GUI mode. So you can get by with only one file of BinDiff. BinDiff can be used to compare very large files in fast mode. BinDiff is on GitHub. A: It is good to separate two approaches: Use a general software that can read binary file (i.e. PE, ELF, COFF, Mach-O, EXE, VHD, DLL) and extract file properties, data, code, resources and so on. Use a software specialized for finding out differences between two files. For 1. there are several commercial solutions, for example Volatility is an open-source alternative to Etch. For 2. Security researchers find that a lot of malware samples are packed using the PE (Portable Executable) format. This is a file format based on the Microsoft's Common Object File Format, which serves to make it possible to move files between different operating systems. It consists of several parts including an executable file and a set of sub-files that make up the structure of the resulting file. Having that in mind, the McAfee team developed the FileInsight application, a solution that allows you to easily open such files, export them to other file formats and, most importantly, conduct various types of analysis. Additionally, it enables you to decode the objects and data included in the packed file.
