Download: Why the variable inside named function is accessing the global scope? I have the following JS code: (function () { var more = 22; function fun1() { console.log('fun1', more); } }()); fun1(); // more is not getting the value 22 Same thing if I move the

variable inside function fun1. A: Because you are not shadowing the outer variable. So, you will be able to use them. function fun1 () { var more = 22; } In your case, you are actually not accessing the outer scope, but you are accessing the global one. If you do this: (function () { var more = 22; function fun1() { console.log('fun1', more); } }()); fun1(); you will see, that more is defined inside the scope of the function fun1, so even there you

will be able to access it. If you do this: (function () { function fun1 () { console.log('fun1', more); } var more = 22; }()); fun1(); you will get an error, because you are accessing the outer more variable from the different scopes. The Builder is a tool that allows users to submit content. Any description in either plain English or HTML format can be submitted to the Builder for indexing. If the user has a photo album, product catalog or other type of item indexed by the Builder, the creators can submit an HTML version of the item to the Builder's Photo section. If the user has a dictionary or other type

of language index then the builder can render a HTML version as well. All submissions to the Builder are public in the Builder, so everyone can access both the Builder and the user's submission. The Builder can also insert metadata tags in the text as well as the HTML. Authors who wish to establish a dynamic and high-traffic Web site for themselves are sometimes recommended to create a multi-author website instead of building a separate

glossary. The multi-author site does not serve as a separate section of their Website but is integrated into it via the builder. This is possible by having all authors merge their glossaries into a single glossary before publishing their glossary, as well as what to do with it. The user can choose to accept all or any of the contributions. The Builder is also a tool that allows consumers to review, vote, like and rank a glossary. Users and editors can

rate and comment on the glossary submissions that have been published. The tools are used to create community-powered glossaries. Babylon Builder Scope: The Builder is a platform that facilitates growth for both the creators and the users of glossaries. The editor can publish his or her glossary to the Builder, and the user can choose to subscribe to the glossary as well as review and comment. The integration is instant. There is no

need to create an account or have a Website. All creators simply go to the Builder and specify the creation of a glossary. Consumers can become part of the Babylon community by rating and commenting on glossaries, and by subscribing to them so they can download them. All titles, quotes and links automatically appear in the Babylon search engine. Users and editors can submit their own glossaries to the Builder through an easy-to-use interface. Forums

and groups are also part of the Builder that bring together users and editors. All the contents, photos, product catalogs, dictionary, language index, business database, product catalogs and more can be part of the Builder. Babylon Builder Features:
