AutoCAD's heritage dates back to the 1982 release of AutoCAD Drafting and Design System version 1.0. This was the first software program to support user-specified interfaces and customization using macros. In 1984 the AutoCAD Drawing Environment (ADE) was released. The ADE enabled the use of personal computer hardware to create geometric forms, data, or CAD drawings. This was followed in 1988 with the release of the first AutoCAD version available as a Microsoft Windows application. That same year, the name of the program was changed to AutoCAD. Another major milestone was reached in 1992 with the release of AutoCAD Graphics. It introduced the ability for users to import and export the native ADE drawings to other vector graphics formats. In 1993, the ability for users to use other programming languages to build custom add-ons was introduced. 1994 was the year that the first commercially available add-ons for AutoCAD were created. In 1994, ConceptDraw Corporation released ConceptDraw Office as an add-on for AutoCAD. 1995 brought about the release of the first commercial product, a CAD Plugin, for the development of add-ons for AutoCAD. AutoCAD Architect, available from CAD Enterprises, was also released in 1995. That same year, Autodesk released the first version of AutoCAD with a Web browser based user interface (AutoCAD LT 2000). In 1996, users were given more control over the behavior of their own menus and dialogs with the introduction of the command reference which is a subset of AutoCAD's own, and still is today. In 1999, version 10.0 was released, becoming the first AutoCAD to support multi-monitor displays. In 2000, Autodesk acquired VRED Inc. which produced an early version of an engineering graphics-enabled Autodesk product, Autodesk Revit. In 2001, Autodesk acquired CatDancer, Inc. which produces the Cat 5b5f913d15
