Field of the Invention The present invention relates to an information recording apparatus for recording information on an information recording medium, and more particularly to an information recording apparatus for recording information with respect to a plurality of information recording media, for example, a DVD (Digital Versatile Disc) and a CD (Compact Disc), both of which are optical discs. 2. Description of the Related Art As a result of enhancement of high-density recording and shortening of a wavelength of laser light used for an optical head, there have been utilized a DVD and a CD which are optical discs. Recently, multi-channel recording is about to be realized, and a DVD having a data storage capacity of 4.7 gigabytes is already in the market. Recently, there has been put to practical use a CD-R which is a type of a write-once type optical disc. Although the data storage capacity of the CD-R is as small as 1.2 gigabytes, the storage capacity is expected to be enhanced in future. When four-channel recording is performed on a CD-R, an R (read) revolution, a REV (re-write) revolution and a REWR (re-write or erase) revolution are required. In 3da54e8ca3
