1. Recording a scene With OBS Studio Free Download, you can record a live scene from a local source or capture a scene from a remote source. All you need to do is connect a video source, such as a camera, screen, or webcam, and a single input audio source (a microphone). For example, you can capture the scene that is showing on your PC screen or place a digital camera to record a live broadcast of your face. OBS Studio Full Crack also allows you to automatically switch from one source to another and record the scene that is currently being shown on your screen. Once you have set the scene and started the recording, you can change the output settings by selecting the output format (FLV, MP4, MKV, MP3, Vorbis, and Ogg Theora). You can edit the scene settings and even adjust the individual recording settings like the resolution, frame rate, and bit rate. 2. If you choose to record a scene from a remote source, you can choose from among several preset options, including the “network layout”, “multi-camera layout,” and “multi-desktop layout.” All of these options come with a variety of settings for advanced users. For example, you can set up automatic transitions between live streams, as well as cross-fade the streams into one another. 3.
