Field of the Invention The present invention relates to a semiconductor device having a circuit composed of a thin film transistor (hereinafter referred to as a TFT) and a method for fabricating the device. For example, the invention relates to a light emitting device having a light emitting element, a display device having a light emitting element, and a liquid crystal display device having a liquid crystal display element. Note that a semiconductor

device in this specification refers to all devices that can function by utilizing semiconductor characteristics. For example, an electro-optical device, a semiconductor circuit, and an electronic appliance may all be semiconductor devices. 2. Description of the Related Art Recent rapid progress in the electronics industry demands finer semiconductor elements. An 570a42141b
