AutoCAD software is divided into three components: AutoCAD or the main product, an optional AutoCAD Architecture Suite, and AutoCAD LT or AutoCAD LT for Mac. AutoCAD main product The AutoCAD main product is designed to quickly bring sophisticated design into the office, classroom, or home. AutoCAD uses a "point and click" interface, where you select commands and options from a menu or pull-down menu. You can then click or drag the cursor to create and modify drawings. The menu commands let you create, modify, and save your work in AutoCAD, choose commands, display a menu of options to help you select options from a set, and switch between drawings in your drawing space. 3. Manufacturing 3D modeling and manufacturing Project management and control AutoCAD is used in many project management and control systems. The PDM for Industry – a replacement of the AutoCAD Print Setup program – is also available for AutoCAD. It allows users to quickly set up specifications for the print shop of the 3D printer. The program is accessed by the user via a web browser, similar to a web browser using the PDM for AutoCAD Print Setup or PDM for Industry in a PC environment. AnandTech has written a number of articles about 3D printing and the impact on CAD. Plug-ins The applications are capable of adding many new features through plug-ins, so that they do not have to be directly integrated into the main application. Autodesk continues to release plug-ins that are made for specific purposes. Some of them are also made for people to create their own plug-ins. There are two types of plug-ins, Autodesk plug-ins and Autodesk Architectural packages. Autodesk plug-ins are available as a free download, and Autodesk Architectural packages are sold separately. AutoCAD plug-ins are accessible by installing the plug-in using the Install Plug-In Wizard. Autodesk Architectural packages are also distributed through the Autodesk Exchange platform. Architectural packages are relatively new and more extensive than Autodesk plug-ins. The Autodesk Exchange platform provides features that allow users to search for and install Autodesk plug-ins. It also allows users to compare a plug-in with another plug-in by checking out files and comparing features. Architectural packages are commonly used for people who want to create new applications for AutoCAD. However, architects who work with Autodesk Architectural packages are also able to work on plug-ins for their projects. Architectural packages also allow for downloading and use of Autodesk-recommended plug-ins. Developers of plug-ins can see the progress of their plug-in's use by seeing the

number of times that the plug-in is installed. Users are also able to rate the plug-in by giving it a rating in the exchange application, and if a plug-in is available for the current version of AutoCAD, the Exchange application will inform the user of that. Free plug-ins are available for both AutoCAD and AutoCAD LT. Aut a1d647c40b
