If it were truly "absolutely amazing" it would get 5 stars, but if it is just average, then 1-2-3-4-5 stars is better. I get this concept a lot when I'm trying to rate apps on the app market, and can honestly say I do it too. I like to rate the product how I personally feel about it, I don't want everyone to just feel the same about my products (I'd rather get 5-star reviews for the apps I make, but I would still like 3-5 star reviews for the ones I create). So, not wanting to upset you, I'll make my 2 cents worth and

say that... Everything about this app is cool, and I like it! I think it would be even more nice if you could actually

A guide to Internet ethics as it relates to academic writing and publishing. The following is taken directly from the "Summary" in the table of contents and has been formatted here for easier reading. The full text of the guide is included in pdf format at the end of this guide for your reference. What is an Ethical Hacker? A hacker is a person who is willing to break the law, or use deceit, to gain unauthorised access to private or sensitive information. Hackers can be of any age, from teenagers to pensioners, however their motives for breaking into a system usually involve financial gain, rather than political or religious agendas. The word hacker is used to describe a person who uses an unauthorized software application. Such programs usually allow a user to break into a network, and make changes to protected files and data without permission. In many cases, the program has been granted access to the network with no input from the users, this allows a hacker to explore the network, and possibly make changes that could be detrimental to company profits, stock price, or personal information. Hacktivism A form of protest that is committed by hackers, where the object is not necessarily to take control of a system, but to expose problems that exist in the internet infrastructure. Hackers are becoming increasingly political, and increasingly call for better standards in their field. Ethics Online The term 'ethics online' refers to the use of Internet tools and practices, and to avoid any form of discrimination, to keep themselves professional, in both their online and offline lives. This involves various types of discipline to the use of the Internet such as avoiding downloading or uploading anything illegal, not participating in activities that may disrupt a network, such as sabotaging a network, or impersonating a person or service. In many cases, when a web service user does not act ethically, the service provider can react by suspending service, which might result in a loss of revenue. Ethics in Computing A phrase that is increasingly popular, and has been adopted by various bodies to define what is and what is not acceptable in the field of computing. For a website to be considered 'ethical' they must conform to the Computer Ethics Code, the set of guidelines of which was developed in 1996. Computer Ethics Code (1996) Aspirations: We aspire to develop an ethical software that respects and values human life, privacy, property, and the environment. Safeguards: We believe that ethical design and use of computers can 77a5ca646e

"add support for latest news" fixed. Just when you thought the floodwaters were receding, it seems the Mississippi River has continued to swell across the U.S. Midwest and Northeast. All of this comes on top of record high temperatures across the Midwest and Northeast. If you want to view the river levels, there are plenty of websites that can do so. Personally, I have two websites that provide me with flood levels from St. Louis down to New Orleans. Flood levels for the St. Louis area were declared at record highs Tuesday morning, with some areas recording up to 9 inches of rain since June. It was the first time any area in the St. Louis area had ever been declared a "Flood Stage" since record keeping began in 1904. (Click here for the Flood Map for the St. Louis area) The flooding is expected to continue throughout the week, but those numbers could get even worse. And with the heavy rain, it won't be going anywhere, which makes for a potential disaster for many homeowners and small businesses.
