Бохучев, Денис Изюменко Князювец, Ладьей Чеклигочювцевой Торговцевой Специализированной Системы ТЕО (предъявление подписи МСМ РП "Президентом Республики Приднестровье", 2.5.2013) One of the more interesting elements of the Greatest Generation is how it has begat multiple generations — the Great Generation and then the Sub-Greatest Generation. And just as it would seem there is a chance for yet another generation, the Greatest Generation is chomping at the bit to join it. In an 11/7/17 Reuters article titled, "85% of Boomers Want Kids, Half Want Kids While 90% are Happily Married," it says, The results of a new survey of U.S. baby boomers show that more than 8 in 10 boomers want to have children, and more than half want to have one or two children. Even more startling, the University of Chicago's Harris Poll found that despite a rush to having kids in their 40s and 50s, 70% of Americans are happily married. It says, Despite major changes in child rearing — from the decline of the stay-at-home mom and the rise of the dual income household — Americans are more content than they were five years ago when this survey began, and more optimistic than they were three years ago. And as for the Boomers, they are much less conservative than earlier generations. "Women in their 40s and 50s are also much more likely than older and younger women to want children," says Laura Lein, the Harris Poll's founder. "That's not to say that there is this huge shift

by ZZ Qian · 2009 · Cited by 1 · The main aim of the Chinese Pharmacopoeia (ChP 2010 version) is to build up a quality .High-dose oxaliplatin and leucovorin combination chemotherapy for patients with relapsed or refractory gastrointestinal cancers: experience from a single institute in the United States. The purpose of this phase II study was to determine the activity of combination therapy with high-dose oxaliplatin and leucovorin (LV) in patients with either recurrent gastrointestinal (GI) cancer or refractory solid tumors. Twenty-seven patients with advanced GI cancers who had previously been treated with at least one prior regimen and had achieved a stable disease or better were treated. The dose of LV (given weekly) was 24 mg/m²/d for patients > or = 60 years of age. LV was given as a 2-hour infusion. Carboplatin was infused over 1 hour for all patients at a dose of 300 mg/m². From May 1997 to January 1999, a total of 27 patients received a total of 40 courses of this combination chemotherapy. The median age of the patients was 58 years (range, 30 to 78). Performance status was 0 in 19 patients, and 1 in 8. After a median follow-up of 13.1 months for surviving patients, the overall response rate of the patients was 23% (6/26): 4% (1/26) in 3 patients with colorectal carcinoma, 2% (1/51) in 27 patients with gastric carcinoma and 6% (1/17) in 15 patients with small bowel carcinoma. The median progression-free survival was 3.4 months (range, 1.2 to 8.4 months) and the median survival time was 7.8 months (range, 2.4 to 23.6 months). There were 3 toxic deaths: septicemia (1), cardiogenic shock (1) and multiorgan failure (1). Twelve patients required hospitalization (5 intensive care unit). Major hematologic toxicities were neutropenia (88%), thrombocytopenia (58%) and anemia (50%). Nonhematologic toxicity was acceptable except for two cases of Grade 3 peripheral neuropathy (7%) and one case of Grade 3 nausea and vomiting (4%). This regimen is associated with a response rate that is greater than that seen with single

The Chinese Pharmacopoeia. 2010 English Edition Free Download The Chinese Pharmacopoeia 2010 English Edition Book. 686 reviews of The Chinese Pharmacopoeia. 2010 English Edition "The textbook was very basic. The coverage of topics was of general interest. " The Chinese Pharmacopoeia. 2010 English Edition. Download Dieser Inhalt ist nicht übersetzt. Geschätzter Nutzer.Pharmacological modulation of the endothelin axis in heart failure. Endothelin-1 (ET-1) and its type A receptor (ET(A)R) promote the development of several types of heart failure. The use of ET(A)R antagonists or soluble fusion proteins of the extracellular domain of the receptor may be a new therapeutic approach in various types of heart failure. They block autocrine/paracrine signaling of ET-1 and ameliorate the structural, physiological, and functional abnormalities associated with heart failure.// *- C++ *-
