Tip Photoshop CS3 includes the Vintage Effects filter, which can help you convert a photograph to an oil painting. The Vintage Effects filter enables you to choose one of 21 presets, or make adjustments to the colors and lighting in your image. ## Digital Darkroom Workflow When it comes to image editing, the biggest challenge for any software program is to produce a final image that is representative of what the image looked like when it was captured. In other words, Photoshop is designed to produce an _accurate_ rendition of a photograph, whereas most other image editors are not. ## Best feature: Ease of use The single biggest advantage to using Photoshop over other image editing programs is its ease of use. You can accomplish everything Photoshop does in a much faster manner. This is because Photoshop's tools have been simplified, and they are designed for you to manipulate the image as quickly as possible. In fact, Photoshop was initially marketed as an easy-to-use image editing program. That's why it's so popular today. However, the benefits of Photoshop go far beyond the actual editing tools. For starters, it's so easy to save and share your image. You can create a compressed version that you can e-mail to someone, an uncompressed version that you can save on your hard drive, or, if you want to be extra careful, a version that preserves details such as color that might be lost in the compression. # Conclusion With so many different editing tools at your disposal, it's no wonder that Photoshop has become the premiere image editing program. You can manipulate images with many different techniques that offer unique and sometimes dramatic effects. Beyond that, it's easy to use and has just enough extra features to make it a worthwhile investment of your time and money. # Chapter 15. GIMP: The GNU Image Manipulation Program In the last two chapters, we've explored software programs that enable you to manipulate images such as Photoshop and Gimp. Both programs have certain strengths and weaknesses, so you should choose the program that best fits your needs. Because Photoshop is proprietary software, it's limited in the number of features that

Q: Solve for $\int_0^{\infty} \tan(x) \sin(x) \sin(a \cos(x)) \mathrm{d}x$ $\int_0^{\infty} \tan(x) \sin(x) \sin(a \cos(x)) \mathrm{d}x$ I tried splitting up the cos and sin into two integrals but I am not sure where to go from there. Thank you for any help. A: Use the double angle formulae $\sin(a \cos(x)) = \frac{a \sin(x) \cos(x) - a \cos(x) \sin(x)}{a^2 - \cos^2(x)}$ $\cos(a \cos(x)) = \frac{-a \cos(x) \sin(x) + a \sin(x) \cos(x)}{a^2 - \cos^2(x)}$ with the substitution $u = x + \pi/2$

$$-\frac{a}{a^2+1} \cos(a \cos(x)) - \frac{a}{a^2+1} \sin(a \cos(x))$$
$$+\frac{a}{a^2+1} \cos(a \cos(x)) + \frac{a}{a^2+1} \sin(a \cos(x))$$
$$= \frac{1}{a^2+1} \left(-a \cos(a \cos(x)) + a \sin(a \cos(x)) \right)$$
$$= \frac{1}{a^2+1} \left(\sin(a \cos(x)) + a \cos(a \cos(x)) \right)$$
$$= \frac{1}{2} \left(\tan(a \cos(x)) - \frac{a}{a^2+1} \right) = \frac{1}{2} \tan(x) + \frac{a}{2(a^2+1)} \left(1 - \frac{a}{a^2+1} \right)$$

Hidalgo (Hato Rey) Hidalgo is an affluent residential neighborhood in the borough of Hato Rey in Santo Domingo, Dominican Republic. It is bounded on the west by the Boulevard of the Eagles and the city highway of Avenida Colón, on the north by the city's north-south highway of Avenida Palmiro Correa, on the south by a section of the Cibao valley, and on the east by the Cibao river. Hidalgo was one of the first areas of the city to develop into a residential area in the second half of the 19th century. Its name is in honor of Miguel de Hidalgo, the first insurgent who proclaimed the first independence from Spain in 1810. Today, Hidalgo is the most exclusive district in the city, and has bungalows, well-kept grounds and exclusive business and tourist-oriented establishments, such as hotels, restaurants, bars and boutiques. Hidalgo is also home to the Italian Consulate-General in the Dominican Republic, which has increased in influence since the mid-20th century. References

Category:Neighbourhoods of Santo Domingo Category:Populated places in the Dominican Republic The overall aim of our application is to develop a highly innovative and effective approach to minimizing the risk of adverse reactions and ADEs in HIV+ persons who are prescribed opioid medications. By focusing on a key aspect of medication errors, we have developed a model and a set of specific, evidence-based strategies to prevent opioid-associated adverse events, while also reducing the risk of opioid abuse. This is achieved by combining the traditional methods of patient education and provider screening with a novel medication reconciliation process that involves nurses as the primary source of patient education. The central premise underlying our approach is that the adverse reaction and abuse potential of opioids can be minimized by maximizing the information that patients and providers have prior to medication administration. Patients and providers can then be supported to make medication-related decisions that lead to optimal outcomes. This research will translate existing practice guidelines into an innovative approach and will utilize a team of investigators with complementary expertise to conduct a pragmatic randomized trial. The goals of the study are to 1) evaluate the efficacy of a nurse-implemented medication reconciliation (N-MR) intervention to reduce the incidence of adverse events, including opioid abuse, and 2) evaluate the costs and cost-effectiveness of N-MR intervention relative to
