Effects Photoshop can add various effects, such as blurring, healing, and levels adjustments. New Layers Settings controls include tools for Reducing Color, Adjusting Levels, and Removing Rasterized Images. Advanced Actions Typical actions are simple scripts, scripts that can be called up repeatedly. These are Action Scripts They are similar to Photoshop scripts with a few differences. It is also easier to customize your script, you don't need to keep creating new PSDs. You can add your own actions to the library. Advanced Actions are not limited to Photoshop, they can be used in several programs (like Lightroom and Final Cut Pro). These scripts can automate all kinds of tasks, like rotating, cropping, reducing color, resizing, saving, and copying images. Archive Actions An action is a group of scripts. You can create your own. Some scripts, like creating a new image, may require that you do certain things, such as insert a certain set of files into Photoshop, select the right type of file, or use a certain command. In Photoshop, in the Actions panel, you can see other scripts for the same functions. You can mix and match different actions to create your own script. It's not that hard to create your own. The hardest part is deciding which actions are useful and which are not, and creating a unique script that does just what you need. This way, you can use a mix of actions and customized scripts in your work. It will take time to fully understand the scripts, but you can combine actions and even customize the scripts so that they will perform the task that you want. This tutorial shows you how to create a custom action using Adobe's Action Editor, found in the Photoshop Actions panel. Step 1: Build a Script In Photoshop, choose Edit > Scripts > Scripts from Libraries or use the shortcut key command+N Step 2: Add Actions to the Script You can use the actions that come with the Action Library, which are included by default, or you can add your own actions. If you go into the Actions panel, you see the 'Available Actions'. Click on that and you'll see the actions with which you have the most experience. But you can add your own.

Q: Extending a vector space Let $K=\mathbb{Q}(\sqrt{3})$ and let $A=\{a+b\sqrt{3}|a,b\in\mathbb{Q}\}$. What is the highest $k\in\mathbb{N}$ such that $K^k\subseteq A$? I don't know how to get started, so any hints would be appreciated. A: Hint: If $x+y\sqrt{3}\in K^k$, then $(x+y\sqrt{3})^k=x^k+y^k\sqrt{3}+\binom{k}{2}x^{k-1}\sqrt{3}+\dots+x^{k-1}y^{k-1}\sqrt{3}+y^k\sqrt{3}$... EDIT: We will show that $\mathbb{Q} \subset A$ by showing that A is a field. We proceed by observing that A is a subfield of $\mathbb{Q}(\sqrt{3})$. We can do this by looking at the polynomial $X^2 - 3 \in \mathbb{Q}[X]$. As it is a quadratic polynomial, it will have a root in $\mathbb{Q}(\sqrt{3})$. The general rule (says) that if there is a polynomial with a root a then a is algebraic over $\mathbb{Q}$, so let's see if $-\sqrt{3}$ is a root. We can see this as follows: $(-\sqrt{3})^2 = 3$ and $X^2 - 3 \Rightarrow X + \sqrt{3}$. So $-\sqrt{3}$ is algebraic over $\mathbb{Q}(\sqrt{3})$. Thus A is a subfield of $\mathbb{Q}(\sqrt{3})$. Now, let $k > 0$ be an integer, and let r be a root of the polynomial X^2
