This Asus utility is used to control most of the Asus laptops. It is very useful because it gives you the possibility to change not only the background or the theme but also all the system fonts and the visualisations of the system. All of the images you see here are part of the included ATKOSD2.EXE and are included in the zip archive. You do not need to set any path. You just click on a PNG image you want to use. All the pictures have been made with GIMP so that you can use them as normal png images. The settings are quite easy to change. You can change the background colour, the Asus log-in background, change the fonts (script, monospace), visualise system time, activate different screensavers or use two different screensavers at the same time.
