The paper introduces a proposed sub-syndrome of first-episode, treatment-resistant schizophrenia (TOSR). This sub-syndrome is defined by the chronicity of the illness and persistence of poor outcome despite adequate treatment with a typical antipsychotic (ATYP) and a broader range of psychotropic medications. The concept is distinct from treatment-refractory schizophrenia, which is a syndrome characterized by the absence of significant remission on treatment with ATYP. The clinical, pharmacological, and treatment-related features of this proposed sub-syndrome are compared with current classifications. An example of a typical case is given to demonstrate the defining features. The existence of this proposed sub-syndrome is inferred by the presence

$250-$500 USD. No? I also agree with others about it being possible to learn the command line shell, and then go on to the Linux environment. There are many good introductory/advanced courses available online. Personally, I would recommend the Linux Essentials books, by David Stein and Rick Niles. I think learning how to build a Linux based server is a must. Such a Linux based server needs to run 24/7, with a basic GUI for end users. It also needs to play nice with my smart phone, and our wireless network. It also needs a low power-consumption device (the server) and a very powerful server. The server can go almost on my desk at work. Finally, it has to be very simple to setup and maintain. A lot of these requirements can be
