Basic layers What if you want to create a new page in your document? You wouldn't put every part of that page directly into your image, would you? You'd start with a layer and a background image, then put the rest of the image on top of that. Take a look at the Layers panel in Figure 14-1. The bottom layer in the Layers panel represents the `_ground_` or background of your image, as shown in the top image in Figure 14-1. Notice that you can select more than one layer at a time. So, for example, if you are editing a photograph of a man's

Effects of amphotericin B infusion on platelet function and fibrinolysis in patients with septic shock. Amphotericin B infusion has been shown to produce thrombocytopenia in patients with septic shock. The mechanism of thrombocytopenia was not understood. We evaluated changes in platelet function and fibrinolysis in patients

with septic shock. Twelve patients were evaluated, in whom platelet count decreased from a mean of $273 \pm 55 \times 10^3/\mu\text{L}$ to a mean of $75 \pm 41 \times 10^3/\mu\text{L}$ after a mean of 5.2 ± 2.3 days of amphotericin B infusion (10 mg/kg/day). In some patients, the lowest platelet count was around $24 \times 10^3/\mu\text{L}$, but in most patients, it was around $45 \times 10^3/\mu\text{L}$. Four patients showed thrombocytopenia (platelet count less than $100 \times 10^3/\mu\text{L}$) for several hours after amphotericin B infusion. The platelet function was investigated after 5 days of amphotericin B infusion. In response to ADP ($2.5 \mu\text{M}$), platelet aggregation increased slightly in 4 of 12 patients, and no changes were observed in the other 8. In response to collagen ($5 \mu\text{g/ml}$), platelet aggregation increased in 6 of 12 patients and decreased in 2. In response to thrombin, platelet aggregation decreased in all patients. No changes in plasminogen or plasmin activity were observed. Amphotericin B infusion caused thrombocytopenia in patients with septic shock, but the platelet dysfunction was not explained by thromboplastin production because thrombin aggregation was inhibited. Although the mechanism is not known, the present study suggested that amphotericin B infusion caused platelet dysfunction in patients with septic shock.

About Me Tuesday, May 9, 2014 BORDER - ST. LOUIS David and I were in the right place at the right time to grab a table and a beer after work at this cool little joint. Go for the beer and don't go past the second round of eats. Of course the cut-off time was an issue when it was opened, but they were nice about it and we were able to sit there for at least 30 minutes until the place was empty. Drug and alcohol use and
