Surgery of infected aortic valve endocarditis in children. To review our experience in the surgical management of infective endocarditis of the aortic valve in children. We report a series of 33 patients presenting with their first episode of endocarditis of the aortic valve between 1988 and 2001. In all patients the diagnosis was based on clinical findings, transthoracic echocardiography, and blood cultures. Medical treatment was instituted in 26 (79%) of the 33 patients. Twenty-nine patients (88%) had septic emboli. Mitral valve involvement was present in nine patients. Twenty-six patients (79%) underwent surgery and the mortality rate was 12%. The overall hospital mortality rate was 24%, being 12% if mitral valve disease was present. The one-year survival rate was 74% (eight patients died during follow-up). The most common procedure performed was aortic valve replacement. The surgical management of aortic endocarditis in children is demanding, but usually successful. Survival is favorable for this age group of patients when the lesion is restricted to the aortic valve.Application of the preoperative US and post-operative CT examination in staging and pre-operative evaluation of colon cancer. To evaluate the application of the preoperative ultrasound (US) and post-operative CT examination in staging and pre-operative evaluation of colon cancer. Sixty-five colon cancer patients with a mean age of 54.1 years (range: 37-78 years) who underwent preoperative US and post-operative CT examinations were enrolled. Of these, 36 patients had confirmed pathology, and 29 of them were complete clinical stage (cT) and lymph node (N) stage (cN) disease. The sensitivity of US in detecting cancer in the colon or colorectal tumor was 92.3% (27/29), the specificity 100% (36/36), the positive predictive value (PPV) 100% (27/27) and the negative predictive value (NPV) 89.2% (36/40). In the evaluation of metastasis in the mesenteric lymph nodes the sensitivity was 96.2% (28/29) and the specificity was 98.3% (37/38). Thirty-three patients who underwent preoperative US and CT had significantly higher T stages (t = 2.247, P = 0.03) and N stages (t = 2.343, P = 0.03

How many competitors are there for the iPhone? - getreal If there are 50 million+ PCs, how many are competing for the iPhone? ====== michaelpinto If you didn't know what the Apple iPhone was, you wouldn't even ask this question. It's a phone, that's it. And the question is just so ignorant I'm not going to answer it. ~~~ quillette That's just it. There are hundreds of Android phones competing with the iPhone for iPhone owners. ~~~ michaelpinto The question was specifically about comparing the number of competitors for the iPhone versus PCs. Yes there are hundreds of Android phones and yes there's Google's hype machine, but the question was about comparison to PCs. BTW: Many of these phones are based on Windows Mobile, MeeGo or maybe even one of the Linux variants. So far Android has not caught on as a real phone platform. #include "MantidDataHandling/LoadData.h" #include "MantidKernel/ConfigService.h" #include "MantidTestHelpers/BatchStatisticsTestHelper.h" #include #include namespace Mantid { namespace DataHandling { namespace { /// A helper that can be used when loading a data file and then checks that /// batch statistics are correct class LoadDataBatchStatisticHelper : public LoadData { public: explicit LoadDataBatchStatisticHelper(const std::string &fileName) : LoadData(fileName) {} private: virtual void checkBatchStats(const std::string &name, const BatchStatisticsTestHelper &helper) const override { if (m_helperEnabled) helper.checkBatchStats(m_name, m_batchStatistics); } void printBatchStatistics() override { if (m_helperEnabled) m_batchStatistics.printBatchStatistics(); } private: BatchStatisticsTestHelper m_batchStatistics;
