Reconnector Crack Free [Latest-2022]

Reconnector is a small software application whose purpose is to help you check and reset your Internet connection at a custom time interval. Portable tool You can store the utility on USB flash drives or other portable devices to have it with you all the time. In addition, you can gain access to its features by quickly opening the executable file, as you do not have to go through an installation process. There are no leftovers written in your Windows registry so you can get rid of it using a simple deletion task of the file that you have downloaded from the Internet. Command-line console Reconnector can be controlled via the command-line panel. Although inputting command-line parameters may scare off less experienced users, this is not the case with this program because it provides an intuitive set of options. A wizard-like assistant is employed for helping you configure the dedicated parameters. You only need to follow the predefined steps in order to complete the setup process. Reconnector gives you the possibility to select the action that you want to trigger, namely check or reset the connection, or delete previously stored settings. You are allowed to input the preferred number of seconds when the app automatically checks or resets the connection, and provide information about the connection name, username and password. Bottom line The final verdict is that Reconnector provides a straightforward software solution for helping you check your Internet connection at a specific time and re-establish a broken connection automatically. On the downside, it hasn't benefitted from an update from a long time so you can make use of its capabilities especially on older operating systems like Windows XP and Vista. Key features: ? Check your Internet connection automatically at a specific time. ? A timer can be adjusted in order to accommodate different periods. ? The application is portable; a plug-in is not required to make it work. ? Reconnector can be controlled from the command-line panel. ? Save the settings that you previously configured. ? The utility has only a small amount of information written in the Windows registry. ? It does not keep any traces of previously performed activity. Reconnector Main features: ? Reconnects automatically when an Internet connection is lost. ? Settings can be configured to automatic for the day, month, or year. ? You can use a predefined time

Reconnector Patch With Serial Key

Get yourself reconnected to the Internet. Reconnector is a small software application that solves a common dilemma: You've lost your connection to the Internet and you can't figure out how to get it back. Reconnector solves this problem by checking if you have a working Internet connection at a pre-chosen time. And if you don't, Reconnector resets it for you. But wait, you said: What if your connection is down at a time I want to check it? Re-enter a longer period to be sure that your connection is really down: Reconnector is the perfect tool for situations like that, as it allows you to check your connection only for as long as you want. It will stop it and then start it again automatically after a pre-chosen period of time. For how long is your connection (or the connection from your Internet Service Provider) down? As a crucial parameter you can enter the seconds of the desired check time. What if the connection is down, but won't reset? You can easily tell Reconnector when your connection shouldn't be reset anymore: If your Internet connection isn't working, but it still takes a long time to fail again, enter 0. Reconnector will check if it's not able to connect and if it is, it will simply tell you if it will still try to connect in 10, 20 or 30 seconds. If the connection can't be checked in 30 seconds, it will try to go back to the point where it stopped (actually starts over again). If it can't reschedule the check, it will run one more time after 30 seconds. After 30 seconds the connection has been down for long enough and Reconnector decides to reset it. A few seconds later, your connection gets broken again. If this happens more than 3 times, you get a notice about that. What if I want to check my connection right now? Don't want to wait for a certain time? No problem! Reconnector can check your connection right now. How do I reset the connection? To reset the connection, you can simply choose the check option from the "Tools" menu. Which connection can be reset? You can choose the connection to be reset. There are four main ones to choose from: WiFi, Ethernet (LAN) and Bluetooth
