What's New In?

Process Spy shows information about your computer's current processes, and automatically generates an Excel spreadsheet with this information. The process detail information includes the name of the process, the executable file name, the process ID, the Company Name and Description, the process's memory address, the executable file's version number, the main executable file's location, the main executable file's name, the windows information, and lastly, the window's properties (minimized, unhidden, etc.). It is able to detect processes that are not running on your computer, and helps you determine if the computer is running on a virus. What is new in this release: This release added support for Windows NT 4.0 and Windows 2000. How do I install or uninstall Process Spy? This update to Process Spy is plug-and-play. A plug-and-play software update requires no changes to existing files or registries and will not create or change any files on your hard drive. Click the "check for updates" button on the Start menu to check for new versions of Process Spy. (Note: you may have to restart the program after installing the update.) Copy the downloaded installer file to your hard drive. Double-click the installer file to start the installation program. Follow the instructions on the screen. When the installation is complete, run the new version of Process Spy. Note: The installer produces no files other than those that are necessary to install the update. All other files remain unchanged. If you encounter problems when installing this update, you may manually copy the downloaded file to your hard drive in the same location as the original. What is new in this release: This is a bug fix release. Please refer to the release notes below for information about changes made in this release. * Fixed a critical problem that would cause the application to crash for some users on Windows NT 4.0. * Fixed several issues related to files that do not have proper "Read" permissions. * Fixed a problem with settings saved to the application configuration file. * Fixed a bug that caused problems for users who run Windows 2000 as a Standard User. * Fixed

an error that prevented the application from starting after installing updates. * Fixed an error that prevented the application from starting if a temporary Internet file for Internet Explorer 5.x had been deleted. * Fixed an error that prevented the application from starting in certain situations

System Requirements:

Affected versions: Solution: The search has been completed. We're sorry this problem has occurred. Please try a different search.
