## Fifa 22 Serial Key [April-2022]

Full details of how FIFA's player AI has evolved can be found in our dev blog. Our FIFA developers have been deep in the detail of implementing this new tech, getting to grips with the technology and explaining what this means in game terms. For more information about what we're bringing to the game, read through our preview with the full list of new player traits, team tactics, techs and more. New Player Traits FIFA 22 will offer improved player control and sensing via new player traits. We've designed these traits to make every player and every team more intelligent and effective. Intelligence The ability of players to do more with less has meant a trend for the tactical movements of players in

---

possession to become more direct. This has helped reduce the need for experienced players to make physically-demanding long passes. The team's tactics dictate that the play is more direct and less wheeling and dealing, often centering on the link of the number 10's role. While FIFA 21's players had better reaction times, aiming and off-the-ball awareness, in FIFA 22, our goal is to completely change the way football is played tactically, allowing our players to make better decisions and use the ball more intelligently. We are starting with a base configuration of traits that have the best chance of fitting the way FIFA is played today, and then experimenting to see what else can be improved. With traits, we've made the decisions about what each player 'ought' to do. We want players to be able to make smart decisions, and not have to think as hard to do so. The new player traits we've developed for FIFA 22 should make it easier for players to make smart decisions, and enable more creative football.

- Defensive Intelligence and Defensive Reaction will help your players make more intelligent decisions in defence.
- Defensive Work Rate will improve the decision-making ability of your defenders.
- Offensive Intelligence and Offensive Transition are designed to improve team-play that is more mobile.
- Offensive Mobility adds more

---

unpredictable trajectories to player passes. • An improved Aiming and Off-the-ball Awareness trait will make better decisions and anticipating moves of opponents. • Improved Vision and Tackling will make your players tackle more intelligently. The base trait for each player is broken down into five different categories:
