text and cases swapna pradhan 5 market ".Q: Resizing/Rotating a UIImageView inside a UIScrollView I have a UIScrollView to which I add a UIImageView and then a UILabel (placed below the UIImageView). The UIImageView and the UILabel are the only views in my view. To explain what I want to do better, I have a big picture displayed in the UIImageView, which I would like to either rotate in 3D or zoom in and out (depends on what I am testing) and then I would like to position the UILabel below the UIImageView. But I keep failing in doing that. Either it will not respond to the rotation/zoom or I will not be able to position the UILabel at the correct place. Why is this happening and how can I do this? A: Make sure you add the label to a view hierarchy. Don't assign it to nil or an empty string. Set the frame. See also "Why does'messageLabel' remain empty?" in this blog post. I'm no expert on the topic. Have you tried the answer there? (1) Field of the Invention The present invention relates to a flash memory, and more particularly to a flash memory with an improved circuit structure for controlling the read voltage. (2) Description of the Related Art FIG. 1 is a circuit diagram of a read circuit of a flash memory of a conventional floating gate memory cell. The flash memory cell can be represented as a capacitor, the capacitance of which is stored with electric charge by means of storing the data "0" or the data "1". When the memory cell is at the state "0", the capacitor has a relatively low voltage. Thus, the flash memory cell is turned on by applying a high voltage thereto, and the voltage at a bit line is transferred to a pre-amplifier. When the memory cell is at the state "1", the capacitor has a relatively higher voltage. Therefore, the flash memory cell is not turned on by applying the high voltage thereto, and the voltage at the bit line is not transferred to the pre-amplifier. The voltage at the bit line is amplified by the pre-amplifier, and the amplified voltage signal is transferred to the sense amplifier. The sense amplifier compares the 595f342e71
