You can do some digital alteration with Macs using Quick Look (introduced in Chapter 15). Photoshop provides functions for manipulating images in the following categories: * **Adjust:** Curves, color adjustments, and many other features that allow you to modify color, contrast, brightness, and other image properties * **Adjust Color:** This tool is a compendium of different tools — levels, curves, spot healing, and so on — that help you adjust the colors, colorshifts, and brightness in your image. Adjusting color often results in a change of hue, so your image may look more like a new color than a photo, but many people find the changes appealing. Although some people might say, "Well, duh, I already knew how to adjust colors," many new Photoshop users find adjusting colors so much easier and more intuitive than it would be in other programs. For example, you select a color on the photo and then just press a button to instantly change that color to another. * **Annotate:** This tool allows you to add notes to an image, such as copyright information, the name of the photographer, and other information * **Blur:** This tool enables you to apply blur to an image, which is often used to soften sharp lines in objects. (Chapter 3 has more on blurring images.) * **Clone:** The Clone tool is a new addition to Photoshop in the latest versions, which enables you to duplicate the effect of any selection in a layer onto another layer, onto a new document, or onto a blank spot on the current document. This is very useful for removing an object, leaving only the object you want in the current image. The best method of learning how to work with Photoshop is to work as though you were creating a new image, and then learning to manipulate specific items in an image.

Star & Dagger Star & Dagger is the first studio album by Star & Dagger, released on September 7, 2009 through Lumberjack Records. Reception The album received positive reviews from critics. Alex Macpherson of The Gigwise gave the album a positive review, comparing it to the works of Sigur Rós, "In many ways, Star & Dagger's music is akin to Sigur Rós, but with a much fresher take on the sound and a more immediate delivery. Frontman Joey Dempsey remains true to his West Coast roots, with his vocals never in danger of drowning out the music and the lyrics often referring to the trials and tribulations of modern life." James Fletcher of Rock Sound gave the album a positive review, writing, "The Icelandic trio's debut comes with enough power to rival the best of heavy music whilst retaining their own hook-filled sound and vocal charms. There is no doubting that this is a band to watch." Those views appear to have permeated the tiny community, leading to a horrific double murder that has shocked the province. The crime happened in early July on a popular downtown street in the city's east end, the area popular with younger residents looking for an urban experience. Police say two men attacked another man in an alley, stabbing him repeatedly. It's a crime that shocked Lethbridge, a city of about 75,000 people. The murder took place less than a half-kilometre away from the home of the city's mayor, Stephen Mandel, who has painted the city in a positive light in the past. Mandel is largely known for presiding over the construction of the Our Lady of Lourdes and Holy Trinity Catholic church, which is prominently featured on the city's iconic yellow road signs. Mandel also preached at the church in the early 1990s while serving as a priest. And, in the past, the mayor

Q: how to bind a array of a class? How can I use a two-dimensional array to bind an array of a class? I have a class for arrays (2d) and I want to create a class object and populate it with elements of the 2D array. I have the following code: // class array template class array { public: inline int operator[](size_t i) { return this->array[i]; } int array[size][size]; }; class Element { private: int a, b; public: int getData() { return a; } void setData(int d) { this->a = d; } }; int main() { Element *p1; p1 = new Element[4]; p1[0].setData(1); p1[1].setData(4); p1[2].setData(6); p1[3].setData(9); // array b;??? int size = 4; b[0] = (Element*)p1[0]; b[1] = (Element*)p1[1]; b[2] = (Element*)p1[2]; b[3] = (Element*)p1[3]; for (int i = 0; i [size];
