With a huge range of use cases, Photoshop is actually a very diverse and very flexible tool. Thus, it is one of the most useful programs in your toolbox. Although this can make it somewhat overwhelming at first, it has some really nice features that you should know about. Let's take a look at what Photoshop has to offer and what you can use it for. Photoshop vs. Illustrator In a sense, Photoshop is one of the most advanced tools on the market. However, a lot of people confuse Photoshop with Illustrator because they share the same root name. In fact, a lot of people think that the two are created by the same company, Apple, as well. They are, in fact, quite different programs and share few features in common. If they were created by the same company, they would be considered siblings in the same family. Illustrator is meant for creating and editing vector graphics. On the other hand, Photoshop is meant for creating and manipulating raster graphics. That is where the similarities end and you realize that one is a bit more heavy than the other. Photoshop is a full-blown program, so it has a ton of features that Illustrator lacks. Illustrator is a limited program. Many people often use Photoshop for illustration due to its versatility. However, it is more suitable for hobbyists and artists than for commercial professionals, since it lacks some of the features in other software. Photoshop vs. Paint Shop Pro The industry standard for graphics editing on PCs, Paint Shop Pro, is no longer produced. However, if you are looking for a powerful tool, you should definitely check out Photoshop, since it is the most powerful program of this kind. Paint Shop Pro is quite a simple, basic program for editing graphics, but it is not suitable for high-end editing. If you are looking for a more advanced program with advanced features that you can use with more layers and multiple fixes, then Photoshop is a better choice. Photoshop vs. Lightroom If you want to edit your images in bulk, you should definitely look at Lightroom. It is a little bit of a user-unfriendly program, but if you follow all the instructions properly, it can give you a lot of work done for you. There is a lot of great software, but only a few are created with the user in mind. If you want to do work yourself, Photoshop

I'm trying to use a command object, but I am running into one of the limitations of stored procedures in SQL Server 2005. The stored procedure that I would like to execute takes in a text file name as a parameter. Is there a way to execute this stored procedure using the command object in ASP.NET? Here is the stored procedure (contents of the actual stored procedure):
