Also new for Fifa 22 Serial Key is the Player Impact Engine. Players can now be evaluated by their real-world physical traits, and the new metrics can be used to influence player attributes. The Player Impact Engine will now calculate player traits from 100 real-world data points, using information from the pitch, a player's goals, shots, passes, tackles, aerial duels and other gameplay actions. These data points will then influence a player's play, providing more gameplay variety. The Player Impact Engine features physics-based intelligence, meaning that tactical decisions will factor into the player traits and formation. Each player will be analysed for the attributes they display on the pitch, using the following eight traits: First Touch, Movement, Passing, Pace, Tackles, Aerial Duels, Chances Created, and Shot Events. To assist with tactical decision-making, the following three types of player attribute will be calculated: Physical Trait: How a player plays in real-life and how they play on the pitch. Tactical Trait: How a player's play on the pitch contributes to the tactical shape of the team. Intelligence Trait: How a player plays in real-life and how they play on the pitch, but also how they perform in possession, in attack, in defense and in the build-up. The more a player does, the more their traits will be calculated and used to determine formation and tactics. When in possession, players will have a complete idea of how to play the game. The Player Impact Engine and HyperMotion Technology will be available on PlayStation 4 and Xbox One platforms.
