Field of the Invention This invention relates to a capacitor type ignition apparatus for an internal combustion engine which can be satisfactorily operated even at a relatively low voltage and in particular to a capacitor type ignition apparatus which can automatically initialize the ignition circuit when the engine is stopped. 2. Description of the Prior Art Capacitor type ignition apparatus are well known and have been used as a so called "self-ignition type ignition apparatus" in which the conduction of electric energy between an igniter and an ignition coil is started by a high voltage induced in the ignition coil when a voltage is applied to the igniter due to an electromagnetic induction. The conditions of the electric energy conduction between the igniter and the ignition coil are so
