- this utility is designed to process METAR and SYNOP code and encode the data on the fly. It accepts METAR and SYNOP code as input and will process the input code in order to choose the correct synoptic group, SYNOP code, and METAR command. It will then process the output from the input code. The output for METAR and SYNOP code is encoded in WMO code FM-15X or WMO code FM-12X. - this utility does not accept regional groups. If you would like a utility which has regional groups capabilities, please see Regional Encode Utility, which has been specifically designed to process regional group data. - note, if you are using regional groups, you will need to set the " input parameter to the name of the regional group you are using. - synoptic groups are assigned as follows: - WMO FM-15X: from FM-15X SYNOP, SID (DE), STR (DE), VTS, BD, CD, AGM, SRT - WMO FM-12X: from FM-12X SYNOP, SID (DE), STR (DE), VTS - To use the regional groups configuration, you will have to enter the region name of the region you are processing, as well as the regional group name. - if you are using the regional group, you need not specify which SYNOP/SYNOP or METAR. - (you need to use the regional group regional group name) Input Parameters: - INPUT - (default is "") - select the synoptic group you wish to encode. use the Synoptic Group List to see the synoptic groups available. - can be WMO FM-15X or WMO FM-12X - the default output is WMO FM-15X -
