Keep the following in mind when using the different tools in Photoshop: For creating images you can take advantage of the functions of the Toolbox at the top of the screen. Refer to Chapter 5 for instructions on how to customize your Toolbox settings. The Palettes and Tools palette on the right side of the screen let you create and edit your images. The workspace is where you create and work on your image. You can set the workspace up to suit you, or use whatever looks best to you. The workspace contains the Toolbox (with your customized Toolbox), brushes, tools, palettes, and fonts and other items. For instructions on how to set up your workspace, see Chapter 5. The image itself is viewed in the Info window (covered in Chapter 10) so that you can see the image's resolution, color mode, and other information. Photoshop's in-program help system (the Help menu) is fairly extensive and provides short tutorials that explain how to use all the features of Photoshop. Live View lets you see your image on the monitor as if it were displayed directly on the page. It lets you see the content of the image as well as how it's printed. Live View allows for easy resizing of your image to eliminate any cropping of the edges, and it also supports resizing proportions that allow you to zoom in on particular areas of an image. For instructions on how to set up Live View, see Chapter 2. The Resources library (refer to Figure 8-3) provides access to images that can be used in your projects. You can download images from the web, install them, or import them into your project. Click the Shapes tool on the Tools menu and the Shapes panel appears on the right side of the screen. Click the Download tab to access the Resources. **Figure 8-3:** The Resources panel displays files, images, and images embedded within a file. Photoshop does not have a dedicated preference control window where you can customize the programs settings to your preference, although you can modify the settings through the Preferences window covered in Chapter 6. However, you can modify the settings through the shortcuts on the keyboard. The following sections walk you through the basic steps of creating and modifying an image with Photoshop. The Burn Tool simulates the image-blending effects of sunshine or a flashbulb. It enables you to selectively brighten dark parts of an image. The Eraser Tool is useful for removing unwanted objects or layers from images. The Gradient Tool is the main tool for creating smooth color transitions. It can create subtle or dramatic gradients, and can save its settings, enabling you to quickly apply the same gradient again. The Move Tool allows you to move individual layers in an image. The Pen Tool is a freehand tool that enables you to paint on a layer as you would on paper. The Paint Bucket can be used to copy and paste pixels from one area of an image to another. The Puppet Warp is a type of Warp tool that works much like the Transform tool in that you can position and distort a layer. The Recompose Tool lets you reposition layers, including moving them to new positions, combining them, or reducing their size. The Shape Selection Tool is designed to select parts of an image. Use the selection to cut, copy, or drag and drop layers, or move an object within an image. The Smudge Tool can be used to soften and blur an image, or place more paint on a brush or the Pen Tool. The Tile Selection Tool enables you to create selections by painting a freehand grid on an image and then selecting only the gridlines that you want. The Warp Tool is used to warping layers or images around an object. This article was published in "Photoshop Elements, volume 8" and Adobe Photoshop World. Over the last several years, core users of Adobe Photoshop have enjoyed a number of powerful new features that have been added to the program. Most of the features in these previous versions were added to Photoshop CS; some were added in previous versions and made available for use on Windows Vista. However, many of the more recent features were only added in Photoshop CS2. These more recent additions made working with Photoshop on the Windows platform much easier than it used to be. While Photoshop is a great program, it is difficult to learn all of its capabilities. In this book, I cover the more common features of Photoshop and explain how they work. This book is intended to teach you how to use Photoshop in a productive manner. Before starting this book, you should familiarize yourself with the new features found in Photoshop CS2. You can find a tutorial for each new feature at www.adobe.com.

Q: How do I query for all 3 types of values using key value pairs? I have a table called

Question with 3 columns: QuestionID, QuestionText, Answers, and AnswerID. Each answer is either: A YES or NO value a SCORES value which is an integer value of 1 through 10 A CATEGORY value which is a string value such as "Desired Results" or "Terms and Conditions" I've written a query to return all questions that are answered with YES: SELECT DISTINCT QuestionText FROM Question WHERE Answers = 'YES' ORDER BY QuestionID; I've written a query to return all questions that are answered with NO: SELECT DISTINCT QuestionText FROM Question WHERE Answers = 'NO' ORDER BY QuestionID; I've written a query to return all questions that are answered with SCORES: SELECT DISTINCT QuestionText FROM Question WHERE Answers = 'SCORES' ORDER BY QuestionID; I've written a query to return all questions that are answered with CATEGORY: SELECT DISTINCT QuestionText FROM Question WHERE Answers = 'CATEGORY' ORDER BY QuestionID; I've written a query to return all questions that are unanswered: SELECT DISTINCT QuestionText FROM Question WHERE Answers = 'NULL' ORDER BY QuestionID; I'd like to combine these three queries in one place so that a user can see all the questions that are answered with a YES, a NO and a SCORES value. I'm sure I can write some kind of case statement in this that will return the correct values but I'd like to know if there is a way to write a query in a cleaner format that can handle all 3 types of answers in one go. Is there a way to combine these queries in a cleaner format?

A: The following query will do the trick: SELECT * FROM Question WHERE (Answers = 'YES') OR (Answers = 'NO') OR (Answers = 'SCORES') ORDER BY QuestionID; Isolation and characterization of type 1 fimbriae from an enteroaggregative Escherichia coli O
