An episode of coronary reperfusion can increase risk for myocardial ischemia and heart failure. There are limited data on myocardial injury after an episode of coronary reperfusion. We conducted a single-center prospective follow-up study in 41 post-myocardial infarction (MI) patients who successfully underwent a primary percutaneous coronary intervention. The primary endpoint was presence of either an episode of myocardial ischemia or heart failure after an episode of coronary reperfusion. The secondary endpoints were all-cause and cardiovascular mortality. During a mean follow-up of 4 years, 16 patients experienced an episode of myocardial ischemia (35.6%) and 30 patients experienced an episode of heart failure (69.7%). An episode of ischemia was a significant factor for all-cause (hazard ratio=3.42, 95% confidence interval=1.19-9.75, P=0.02) and cardiovascular mortality (hazard ratio=6.92, 95% confidence interval=1.50-31.4, P=0.01). An episode of heart failure was a significant factor for cardiovascular mortality only (hazard ratio=5.65, 95% confidence interval=1.03-30.46, P=0.05). For post-MI patients, an episode of myocardial ischemia after coronary reperfusion was a significant factor for mortality., or possible that it is counsel's strategy and not the judge's ruling that is at issue). ## What's New In?

CodeSimian is an application that provides a graphical, user-friendly environment for the construction of succinct, yet versatile, programs which utilise Java syntax. One of the key features of the software are the supported scripting languages, which can provide the user with powerful tools to automate the construction of programs. CodeSimian is an extension of the WebStart software, but introduces a number of unique features aimed at ensuring that it is completely independent of any Internet connection, which can be particularly useful for novice users. Whether you're a seasoned Java programmer who knows your way around the Java language or whether you are new to the programming world, you'll find that CodeSimian makes the whole process of programming easier and more fun. CodeSimian Features: CodeSimian is capable of creating the following types of programs: Class-based web applications, with the rich functionality of Java's own class libraries Simple source-code editors, which can be used to customise existing programs and create new ones Small programs, which function on a single computer without the need for an Internet connection Bookmarking programs, which can allow individuals to share their own personal programs on the web Novelty programs, which can be designed and created using user-friendly drag and drop features, as well as a graphical interface to Java syntax. The type of programs supported by CodeSimian will depend on the scripting language(s) that are installed on the users' computers. In addition to those languages, CodeSimian can also incorporate those of Java-script and Javascript. More information on the scripting languages can be found on the scripting pages. The combination of CodeSimian and scripting languages provides a unique user-friendly environment for creating and delivering programs, which would otherwise be difficult or impossible to create, due to the technical complexities of Java. CodeSimian is aimed at people who are looking for a better way of developing Java programs. It aims to provide the functionality that Java development would otherwise require in a much easier-to-use form, as well as providing a number of other features which will further encourage the creation of new and interesting programs. CodeSimian can also be used in order to debug your own Java programs. Currently, CodeSimian works with the Internet Explorer 6+, Netscape 7+, Opera 8+, and Firefox browsers. If a browser is not available, CodeSimian will use
