Well-quenched carbon steels, well-poised, are qualified by the chemical analysis for structural steel, where the steel must have a minimum of 2.2% by weight of manganese (Table 1). It must be kept in mind that these criteria take no account of the strengths required in the particular steel. By Author: M Oru . Published on: Apr . View it here. EN 10083-1. EN 10083-1. EN 10083-1, also known as EN 10083, is a European standard EN10083:2007(E) EN 10083-1 is a European standard which defines the chemical composition of heat resisting steel. The standard was published in December 2013. EN 10083-1 EN 10083-1 is the first'standards based' structural steel designed to meet all the requirements of structural steel, including pressure . In Table 1 is given the chemical analysis of steel. chemical composition for structural steel EN 10083-1. is the first'standards based' structural steel designed to meet all the requirements of structural steel, including pressure and pureté.
