Understanding Gravel E-Bikes

Gravel e-bikes are a unique category of bicycles designed specifically for unpaved roads and mixed terrain. Unlike traditional e-bikes, which are often optimized for city commuting or mountain biking, gravel e-bikes strike a balance between comfort and performance. They feature a geometry that allows for a more stable ride on rough surfaces, along with wider tires that provide better traction and shock absorption. Most gravel e-bikes come equipped with a mid-drive motor, which offers a natural riding feel and efficient power transfer.
