

Motor Vehicles Export of the Philippines: A Deep Dive Into the Overall Trade

Motor Vehicles are a crucial component of the globally traded commodity, designed primarily for the transportation of people or goods. The vehicles are not just transportation tools; they are a role player of several influencing factors like industrialization, employment, technology, and others responsible for economic development. The Philippines has recorded a hike in its motor vehicle exports, worth a production rate of 110,350 units. [Philippines Import Data](#) says that the establishment of the Council to promote industrial excellence, along with the public-private partnerships, has been facilitating the overall export of motor vehicles from the Philippines.

The zero-tariff policy on electric vehicles and the corporate recovery and tax incentives, along with the enhanced deductions for power expenses, have resulted in an export trade value of motor vehicles

worth 8 billion US dollars in 2024. The hydrogen-powered vehicle development and the green manufacturing standards followed by the government authorities have been considered pivotal for the hike in the export of motor vehicles. Subscribe to Import Globals, the Philippines' import export trade provider, to stay updated with the latest information regarding the motor vehicles export of the Philippines via the Philippines Trade Data.

WHY ARE MOTOR VEHICLES A TOP GLOBALLY TRADED COMMODITY?

Motor vehicles are a top choice for the globally leading traders because the commodity has established itself as a universal necessity. These are indispensable tools for mobility, like the transportation of people and goods. The demand for motor vehicles has been increasing in a continuous manner in different central areas across the globe, which has been creating a constant and expanding global market. Beyond its global importance, motor vehicles hold a significant role in industrialization, as most of the industrial essentials like steel, aluminum, rubber, plastics, and glass are used in abundance in production.

The interdependence of motor vehicles with industrial commodities has contributed a lot to the global GDP. For many of the top trading authorities, the export of motor vehicles, including cars, trucks, and motorcycles, has been a pivotal tool for economic growth. The advancements in fuel efficiency and the safety systems regarding the rising adoption of hydrogen-powered vehicles have been facilitating the revenue rate. These are basically considered as industrial assets that directly influence the positive outgrowth of the export rate.
